

Which HydroMassage Cooling System is Right for You?

A common question we hear is “How do you keep the water warm?”

Most people are surprised to learn that when you have a number of clients using HydroMassage throughout the day, the temperature of the water inside the unit naturally will heat up by itself.

To ensure your HydroMassage continues to operate properly without overheating, it’s important that it’s equipped to cool down the water to offset the heat generated.

This balance is what allows HydroMassage to maintain the exact water temperature setting you’ve selected.

Here’s the guide to determine which cooling system is the right fit for you:

If your HydroMassage location has the following:	This is the correct cooling system / model for you:
<ul style="list-style-type: none"> • Large open area (30’ x 30’ or larger) with plenty of cool air flow • Ambient room air temperature can maintain 73 degrees F (23 C) with HydroMassage in operation (additional 5000 BTU per unit) • Open entryways (no doors) to the space • Large open space directly above the room, with no ceiling • Minimum of 300 CFM HVAC available per HydroMassage unit • Thermostat located in the room or in the return air vents 	<p>Internal Cooling System (300, 340, 440 models only)</p>
<ul style="list-style-type: none"> • Small private room (ex. 8’ x 10’) • Naturally warmer air temperature in the room • Enclosed room with door • Drop ceiling • Limited or unknown HVAC inside the space 	<p>External Cooling System (320, 350, 450, 700 models only)</p>

External Cooling System Specs:

- Dimensions: 33.5” x 15” x 10.5”. 81 lbs (85cm x 38cm, 27cm, 37 kg)
- Electrical supplied by the HydroMassage unit
- Cooling system may be installed up to 25 feet away (may be installed in ceiling, basement, or adjacent room that stays between 45 - 100 degrees F, or 7 – 38C).

This is a guide only. For specific questions regarding which model is the right fit for your installation, please contact the HydroMassage sales or technical support departments.
